This is the 5' sequence of the clone insert

This is the 5' sequence of the clone insert

Clone from 5. Wiemann, Molecular Genome Analysis, German Cancer

Research Center (DKE2); Email s. wiemann@dkfz- heidelberg.de;

sequenced by Qiagen (Hilden/Germany) within the cDNA sequencing

consortium of the German Genome Project.

This clone (DKEZp11B2422) is available at the RZPD in Berlin.

This clone (DKEZp11B2422) is available at the RZPD in Berlin.

strand cDNA was primed with a Not I - oligo(dT) primer [5 ApATGGARGATATTTTTTTTTTTTTTTTTTTTT 3], double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not am and Eco RI sites of the modified pTYT3 vector. Library went through one round of normalization. Library constructed by Bento Soares and M.Fatima Bonaldo. "
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Bukaryota, Metazoa, Chordata, Craniata, Vertebrata, Buteleostomi, Mammalia, Butheria, Primates, Catarrhini, Hominidae, Homo.

/done lib="Human lris cDNA (Normalized): fg"
/clone lib="Human lris cDNA (Normalized): fg"
/note="Organ: Bye; Vector: pCMVSPORT6; A human iris
library (bx) was normalized by self-subtraction. One
portion of double stranded plasmid DNA representing the
library was linearized by Not1. This Not1 digested library
was used as a template for biotinylated RNA synthesis
using SP6 RNA polymerase. Another portion of the double
stranded plasmid library was converted to single-stranded
circles in virto using Gene II and Exonuclease III (Life
Technologies). Single-stranded DNA (1 mg) was hybridized
(CQt 500) with 41 mg of Bio-RNA and vector blocking
oligonolocitides. The hybridized Bio-RNA/ss-circles were
removed by streptavidin:phenol extraction. EST analysis
was performed on the library at the NIH Intramural
Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi, Mammalia, Eutheria, Primates, Catarrhini, Hominidae, Homo.
